TOP DECORATION WITH INDUSTRIAL STYLE

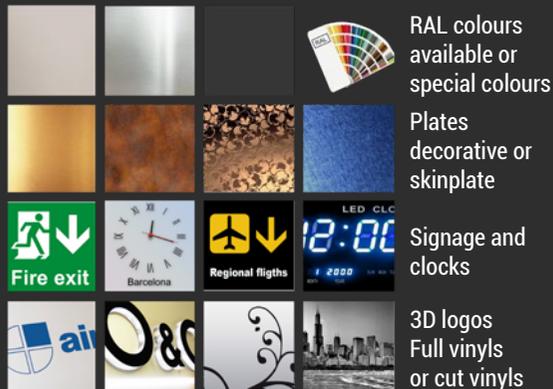

MODERN AND DARING

Airtècnics presents a new concept of recessed air curtain designed to be installed in a totally visible way.

The industrial or urban style was born in the second half of the 20th century in New York and is based on the typical architecture of industrial buildings. It is a current decoration trend in which high ceilings, metallic elements and visible installations predominate.

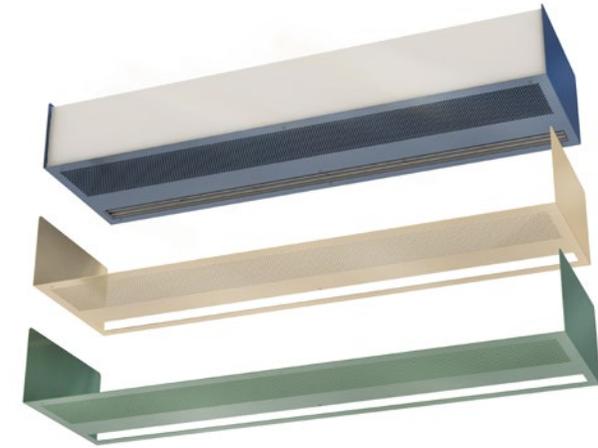

TOP is an air curtain with straight lines and rounded contours with an embellishing cover that can be customised. This one includes the suction and discharge grille in a single piece.

It is ideal for seamless integration into premises and buildings, while effectively and efficiently protecting doors up to 2.8m high.

Integrate and personalise the TOP curtain with infinite combinations.

top

The decorative integral cover is available in different colours to blend in with the surrounding decoration. Stainless steel as an option.

The front housing is designed to include graphics, logos, illuminated signs, signage, clocks or any other decorative element desired by the customer. Available in any colour from the RAL chart or in stainless steel.

Two-colour design, grey RAL9006 housing and white RAL9016 cover as standard.
